Dear Eric,

Welcome to the Newmar News; a quick and easy read, yet presenting relevant DC Power application ideas for Land Mobile, Cellular, Broadband, and Microwave wireless networks. And on occasion, some helpful DC Power tech tips.

We appreciate you taking a little time out of your day to read what is happening while Newmar powers the network. Don't forget to scroll down to the bottom of the newsletter to request your free Newmar Screwdriver.

Regards,
Eric Harmon

Power-Timer Survives Where Others Fail

Proven survival in thousands of applications in the worst under-hood conditions on emergency and public safety vehicles, **Newmar's Power-Timer**, model TMR-30, eliminates dead vehicle batteries caused by power drain from radios and MDTs that must operate while the engine is off.

Components are epoxy encapsulated in a cast aluminum enclosure, with in-line wiring and no screw terminals to vibrate loose. Designed for survival where other timers fail due to high vibration, extreme temperature, and power washing. Disconnect time interval can be programmed from 15 minutes to 15 hours, allowing the user to match auxiliary load use to battery capacity, providing maximum run time yet ensuring adequate reserve for engine start.

Please visit us [online](#) for more information on the Power-Timer and other DC conditioners and monitors.

Distributed Power Essential to Backhaul Network

The fire department of a New York City suburb upgraded the backhaul network for its two-way radio system from traditional leased lines to digital microwave point-to-point technology. The [Rackmount Distribution Panel](#), model DST-20A (UL) was chosen to provide DC power to distribution to the critical communication systems.

The rackmount panel occupies a strategic point in the network between the 48 VDC rectifiers and batteries and the multiple radios, transmitters and related DC loads. Wired for redundant DC inputs for enhanced system reliability, the compact 2 RU (3.5") panel distributes voltage up to 20 loads via a circuit breakers which provide control and over-current protection of loads and wiring. The panels are rated for 900 amps for 12, 24, or 48 volt applications.

For more information, please visit our web page on [circuit breaker distribution panels](#).

Free Newmar Screwdriver

We would love to hear your feedback on the Newmar News. E-mail us at marketing@newmarpower.com with the subject line "Newsletter" and let us know what you think. Include a mailing address and a Newmar Powering the Network screwdriver will be on its way to you. Thanks!
