Newmar's Site Power Monitor Multi-Site Software Simplifies Remote Site Monitoring of 100 Sites

August 10, 2009 – Newport Beach, CA - Newmar announces the release of multi-site console software for their Site Power Monitor, SPM-200, enabling system network monitoring of up to 100 remote sites with a single web page based interface.

The Site Power Monitor is designed specifically for monitoring power supplies, rectifiers, batteries, converters, inverters, UPS's, distribution panels, and AC power at communication sites, base stations, and outdoor enclosures via Ethernet or Wireless connection.

The console software allows system network monitors to consolidate data from numerous locations' Site Power Monitors into a single web interface. Utilizing the console software enables network administrators to view current alarm notification conditions at any one of their monitored sites, combine logged data, and execute firmware updates to several units at once. Additionally, remote sites' alarm level settings can be configured and adjusted from the convenience of one's office.

For more information on the Site Power Monitor and the Multi-Site Console Software, please visit Newmar online at www.newmartelecom.com.

Located in Newport Beach, Calif., Newmar has been supplying reliable, high-quality DC power solutions to the telecommunications industry since 1970.
